

The MRC conrad ball bearing is a single-row radial deep groove bearing with no filling notches. It can carry significant radial loads, and, because of the uninterrupted raceway grooves and the high degree of conformity between balls and raceways, it can carry substantial thrust loads in either direction, even at very high speeds. Single-row deep groove ball bearings are offered open or with single or double shields or seals, as well as with snap rings in various combinations.

Cage Types and Materials

This type of bearing is supplied with a pressed steel cage as standard; however, for special requirements, it can be supplied with a two-piece riveted machined cage of phenolic composition or bronze material.

MRC Bearing Services

These single-row radial conrad-type bearings have 4 mm to 9 mm bores (approximately $\frac{5}{32}$ " to $\frac{3}{8}$ "), and are designed for very small shafts. They are suitable for high speed fractional horsepower motors and small turbines. MRC offers open, shielded, and sealed types. Some sizes are available in stainless steel. 30 Series supplied with ABMA CO radial clearance unless otherwise specified.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

For phenolic composition cage, multiply by 1.66 for grease and 2.00 for oil. For machined bronze cage, multiply by 1.25 for grease and 1.50 for oil. For phenolic composition cage, ABEC-5 or 7, multiply by 2.30 for grease and 2.80 for oil. The speed rating adjustment factors have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

R series bearings are single-row radial conrad-type bearings that are available in inch sizes for shafts from 1/8" to 1 1/2" in diameter. Open, shielded, and sealed types are available, and many sizes are available in stainless steel. R Series supplied with ABMA CO radial clearance unless otherwise specified.

For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

1800-S Series bearings are single-row radial conrad-type bearings that can accommodate light radial loads, two-directional thrust loads, or a combination of both. They are designed for applications where space or weight is very limited.

The 1800-S Series is supplied with an ABMA CO Radial internal clearance unless otherwise specified.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel cage for 1800S through 1828S and 1834S and 1856S. All others for outer land guided machined bronze. The values have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

⁴⁾ Typically non-stocked sizes, please check availability before designing into equipment.

1900-S Series bearings are single-row radial conrad-type bearings that can accommodate light radial loads, two-directional thrust loads, or a combination of both. They are designed for applications where a lack of space or limitations on weight require a bearing with a thinner section than 100-KS Series bearings. Some sizes are available with shields or seals.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

For phenolic composition cage, multiply by 1.66 for grease and 2.00 for oil. For machined bronze cage, multiply by 1.25 for grease and 1.50 for oil. For phenolic composition cage, ABEC-5 or 7, multiply by 2.30 for grease and 2.80 for oil. The speed rating adjustment factors have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

⁴⁾ Typically non-stocked sizes, please check availability before designing into equipment.

The 100-S Narrow-type Light Series is made up of single-row radial conrad-type bearings with bores ranging from 10 mm to 95 mm.

NOTE: This series is obsolete but is still manufactured in a few sizes for replacement parts, please check availability before designing into equipment.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

The 100-KS Extra Light Series consists of single-row radial conrad-type bearings made with bores from 10 mm to 320 mm for light to moderate radial loads, two-directional thrust loads, or a combination of both, where space is somewhat limited. This series is available in plain, shielded, or sealed types, as well as with snap-rings.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

For phenolic composition cage, multiply by 1.66 for grease and 2.00 for oil. For machined bronze cage, multiply by 1.25 for grease and 1.50 for oil. For phenolic composition cage, ABEC-5 or 7, multiply by 2.30 for grease and 2.80 for oil. The speed rating adjustment factors have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

⁴⁾ Typically non-stocked sizes, please check availability before designing into equipment.

200-S Light Series bearings are single-row radial conrad-type bearings made with bores from 10 mm to 120 mm. They are used in applications with moderate to heavy radial loads, two-directional thrust loads, or a combination of both.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

For phenolic composition cage, multiply by 1.66 for grease and 2.00 for oil. For machined bronze cage, multiply by 1.25 for grease and 1.50 for oil. For phenolic composition cage, ABEC-5 or 7, multiply by 2.30 for grease and 2.80 for oil. The speed rating adjustment factors have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33⅓ RPM.

This series is made up of single-row radial conrad-type bearings made with bores ranging from 17 mm to 110 mm. They are used in applications with very heavy radial loads, two-directional thrust loads, or a combination of both.

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

For phenolic composition cage, multiply by 1.66 for grease and 2.00 for oil. For machined bronze cage, multiply by 1.25 for grease and 1.50 for oil. For phenolic composition cage, ABEC-5 or 7, multiply by 2.30 for grease and 2.80 for oil. The speed rating adjustment factors have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

⁴⁾ Typically non-stocked sizes, please check availability before designing into equipment.

SFFC
Metal Shields

SLLC Removable
Metal Shields

SZZC Synthetic
Rubber Seals

Cartridge-type bearings have an extra large grease chamber packed with high quality lubricant. For applications where space for a lubrication system is limited or conditions demand a larger grease supply inside bearing.

Bearings designated SFFC have non-removable metal shields. Many sizes are available with removable shields (SLLC) or synthetic rubber seals (SZZC).

¹⁾ Fillet radius indicates maximum fillet radius on shaft or in housing which bearing corner will clear.

²⁾ Listed values are for pressed steel or polyamide cage, ABEC-1.

The values have been determined through historical application and practice. For a more complete explanation, see page 274.

³⁾ Rating for one million revolutions or 500 hours at 33 1/3 RPM.

Dynamic and static equivalent radial load and life rating

Dynamic equivalent radial load

$P = XF_R + YF_A$ P = Dynamic equivalent radial load
 F_R = Radial load
 F_A = Thrust load
 Z = Number of balls
 D = Ball diameter
 X = Radial load factor
 Y = Thrust load factor
 e = Limiting factor for F_A/F_R

Life rating

$L_{10} = \left(\frac{C}{P}\right)^3$ (Millions of revolutions)

or

$L_{10h} = \frac{10^6}{60n} \left(\frac{C}{P}\right)^3$ (Hours)

C = Basic dynamic load rating
 P = Dynamic equivalent radial load
 n = Speed in RPM

Static equivalent radial load

$P_0 = 0.6 F_R + 0.5 F_A$
 P_0 is always $\geq F_R$
 P_0 = Static equivalent radial load
 F_R = Radial load
 F_A = Thrust load

Internal Radial Clearance	F_A / ZD^2		$F_A / F_R > e$		e
	Units N, mm	Units lb, in	X	Y	
Standard (ABMA C0)	0.172	25		2.30	0.19
	0.345	50		1.99	0.22
	0.689	100		1.71	0.26
	1.03	150		1.56	0.28
	1.38	200	0.56	1.45	0.30
	2.07	300		1.31	0.34
	3.45	500		1.15	0.38
	5.17	750		1.04	0.42
6.89	1000		1.00	0.44	
Loose (ABMA C3)	0.172	25		1.47	0.38
	0.345	50		1.40	0.40
	0.689	100		1.30	0.43
	1.03	150		1.23	0.46
	1.38	200	0.44	1.19	0.47
	2.07	300		1.12	0.50
	3.45	500		1.02	0.55
	5.17	750		1.00	0.56
6.89	1000		1.00	0.56	

When $F_A/F_R \leq e$, use $X = 1.0$, $Y = 0$.
 Values of Y and e for loads not shown are obtained from chart to the right.

Dynamic equivalent radial load and life calculation examples

Bearing size: 309S
 Speed = 2000 RPM
 Basic dynamic load rating (C) = 11900 lbf
 ZD² = 3.62

ABMA CO Internal Clearance

Case 1

Radial load (F_R) = 1890
 Equivalent load (P) = X F_R + Y F_A
 P = F_R = 1890
 Life (L10) = $\left(\frac{C}{P}\right)^3 = \left(\frac{11900}{1890}\right)^3 = 249.6 \times 10^6$ Rev.

or
 Life (L10h) = $\frac{10^6}{60n} \left(\frac{C}{P}\right)^3 = \frac{10^6}{60 \times 2000} \left(\frac{11900}{1890}\right)^3$
 = 2080 Hrs

Case 2

Radial load (F_R) = 1890
 Thrust load (F_A) = 1250
 Equivalent load (P) = X F_R + Y F_A
 F_A/ZD² = 1250/3.62 = 345
 X = 0.56
 Y = 1.27
 P = 0.56 × 1890 + 1.27 × 1250 = 2646
 Life (L10) = $\left(\frac{C}{P}\right)^3 = \left(\frac{11900}{2646}\right)^3 = 91.0 \times 10^6$ Rev.

or
 Life (L10h) = $\frac{10^6}{60n} \left(\frac{C}{P}\right)^3 = \frac{10^6}{60 \times 2000} \left(\frac{11900}{2646}\right)^3$
 = 758 Hrs

Case 3

Thrust load (F_A) = 1250
 Equivalent load (P) = X F_R + Y F_A
 F_A/ZD² = 1250/3.62 = 345
 Y = 1.27
 P = 1.27 × 1250 = 1588
 Life (L10) = $\left(\frac{C}{P}\right)^3 = \left(\frac{11900}{1588}\right)^3 = 420.8 \times 10^6$ Rev.

or
 Life (L10h) = $\frac{10^6}{60n} \left(\frac{C}{P}\right)^3 = \frac{10^6}{60 \times 2000} \left(\frac{11900}{1588}\right)^3$
 = 3507 Hrs

ABMA C3 Internal Clearance

Case 1

Radial load (F_R) = 1890
 Equivalent load (P) = X F_R + Y_A
 P = F_R = 1890
 Life (L10) = $\left(\frac{C}{P}\right)^3 = \left(\frac{11900}{1890}\right)^3 = 249.6 \times 10^6$ Rev.

or
 Life (L10h) = $\frac{10^6}{60n} \left(\frac{C}{P}\right)^3 = \frac{10^6}{60 \times 2000} \left(\frac{11900}{1890}\right)^3$

 Equivalent load (P) = X F_R + Y F_A
 F_A/ZD² = 1250/3.62 = 345
 Y = 1.08
 P = 1.08 × 1250 = 1350
 Life (L10) = $\left(\frac{C}{P}\right)^3 = \left(\frac{11900}{1350}\right)^3 = 684.9 \times 10^6$ Rev.

or
 Life (L10h) = $\frac{10^6}{60n} \left(\frac{C}{P}\right)^3 = \frac{10^6}{60 \times 2000} \left(\frac{11900}{1350}\right)^3$
 = 5708 Hrs

Part Numbering System

Basic Conrad Series

- 100KS
- 200S
- 300S

Sealing Options

- ZZ- Two contact seals
- FF- Two shields
- FFP- Two low friction seals

Other suffixes

- HYB- Ceramic balls
- #1- ABEC 1

MRC hybrid ball bearings are stocked in an open version in the sizes listed. In most cases, hybrid bearings can also be supplied with seals, shields, or low friction seals through the MRC Made-to-Order (MTO) program. In addition to those listed, other sizes of the 200S and 300S series as well as the 100KS series can be supplied through the MTO program. Most series of angular contact ball bearings can also be supplied through MTO.

Designation	d	D	B	r1,2 min	DYNAMIC	STATIC	SPEED	Mass

Prevents Electrical Arcing

When electrical current passes across bearings, a washboard or fluting pattern appears on the raceways, in addition to a darkened grey appearance. This damage usually results in excessive noise which requires that the bearing be removed. Besides the surface damage, premature aging of the lubricant also occurs. The natural insulating properties of ceramic material eliminates this type of damage.

Fluting created by electrical arcing

Lower Maintenance Costs

Maintenance costs can quickly add up if a bearing must be changed frequently. Anything that extends the service life of a bearing without increasing maintenance costs will reduce the operating cost of the equipment. Though the initial cost of a hybrid bearing is higher than a standard steel bearing, the difference is quickly recovered in maintenance savings. Less friction also results in lower energy costs.

Wear caused by static vibration

Extended Service Life

Most bearings are designed into applications based on loading conditions and do not take into account factors such as lubrication, contamination and maintenance. Without proper attention to these external factors, a steel bearing rarely reaches its design L10 life and therefore has a shortened service life. Because of the properties of ceramics, the service life of a hybrid bearing is up to 10 times that of a standard steel bearing. And longer service life reduces the need for maintenance on your machine as well as the costly interruptions in production.

conditions or, if applicable, a higher rotational speed while maintaining the same temperature.

Reduced Wear from Contamination

In contaminated environments, solid particles create dents in the rolling surfaces and raised edges around those dents. This condition causes noise and premature wear as the steel balls roll over those surfaces. The harder ceramic ball material smooths the surface roughness with no material removal. Also, there is little evidence of adhesive wear as seen in steel bearings. This reduces the noise and wear, which extends the bearing service life.

Extended Grease Life

In environments that place high demands on the bearing lubricant, standard bearings experience surface wear because of insufficient lubricant film. Bearings can fail if the initial grease charge is not replenished within an acceptable period of time. Hybrid bearings run cooler and can operate with thinner lubricant films, so there is less aging of the grease and the required relubrication interval will be longer. The result is increased service life compared to standard bearings in the same operating conditions.

Reduced Wear from Vibration

In equipment exposed to static vibration, there is an inherent risk of false brinelling, (the wearing away of the surfaces within the ball and raceway contacts) which can eventually lead to spalling and premature failure. Because of the lighter weight ceramic balls and dissimilar materials, the risk of false brinelling damage is much less.

Lower Operating Temperatures

The heat generated in bearings is attributable to viscous friction from lubrication and load dependent friction between the balls and raceways. The source of the loading is external as well as internal. There is little that can be done to reduce the external loads. However, since ceramic balls have only 40% of the density of steel balls, the centrifugal load generated by the balls is less and the internal friction is lower. This provides cooler running for the same operating

Material Properties	Bearing Steel	Bearing Silicon Nitride	Benefit
Mechanical properties			
Density [g/cm ³]	7.9	3.2	Lower density reduces the centrifugal force and thereby reduces bearing friction
Hardness, HV10 [kg/mm ²]	700	1600	Higher hardness promotes wear resistance against hard particles and lower plastic deformation
Modulus of elasticity, E [GPa]	210	310	Higher modulus of elasticity increases the bearing stiffness. Hybrid bearings deflect less under load, providing more predictable performance
Coefficient of thermal expansion [1/C]	12 x 10 ⁻⁶	63 x 10 ⁻⁶	Lower coefficient of expansion reduces the effects of ring temperature difference resulting in more stable clearance or preload
Electrical properties			
Electrical resistivity [Wm]	0.4 x 10 ⁻⁶ (conductor)	10 ¹² (insulator)	The ceramic balls break the electrical current (DC) path and act as an insulator
Relative dielectric constant	N/A	4.2 to 6.1	The ceramic balls break the electrical current (AC) path and act as a large impedance
Magnetic field influence	Yes	No	Ceramic balls do not respond to magnetic forces
Chemical resistance	Reactive	Inert	Ceramic to steel contacts show no micro-welding and do not seize during poor lubrication
